

Students in Mrs. Cochefski's class understand what happens each day inside a chicken egg during incubation. They made 21 paper eggs with details showing how the chick grows. The students observed the eggs rotation and monitored humidity and temperature. Yes, they read the mercury on the thermometers to maintain 100 degrees. Students learned 17 vocabulary words to build knowledge and care for the precious embryo. We are so proud of the baby chicks we have to feed, to have and to hold! Next, we will use observation skills to record the chicks' behaviors as we help them grow!
